

MJ Superstars Launch Handoff

Steps requiring your Mac / Apple Developer account

What Claude Already Did

- Phase 4: Uptime monitoring live (self-checks every 5 min, Sentry alerts)
- APNS_KEY_ID and APNS_TEAM_ID set on Render (25 env vars total)
- @apple/app-store-server-library installed for receipt validation
- Fastlane updated to use env vars (no more hardcoded paths)
- Info.plist build version now uses \$(CURRENT_PROJECT_VERSION)
- Responsive layout fix deployed (viewport lock, safe areas)
- 20 App Store screenshots ready in correct dimensions
- All metadata files complete (name, description, keywords, etc.)
- Webhook endpoint ready at /api/webhooks/app-store
- IAP verification service with graceful degradation

Phase 5: Push Notification Certificates

Time: ~15 min | Status: ALMOST DONE

The APNS code, env vars, and key content are all configured. You just need to verify the key works.

- Open Apple Developer > Keys and verify key TS9A6TPWWR is active
- Ensure the key has Apple Push Notifications service enabled
- Test push on a physical device (simulators can't receive pushes)

Note: APNS_KEY_ID=TS9A6TPWWR and APNS_TEAM_ID=FAAWCBHB9C are already on Render

Phase 6: App Store Connect + IAP Products

Time: ~45 min | Status: NEEDS YOUR ACTION | BLOCKS SUBMISSION

6a. Verify App in App Store Connect

- Go to appstoreconnect.apple.com > My Apps
- Confirm 'White Mike' app exists with Bundle ID: `com.mjsuperstars.app`
- If not, create it: + New App > iOS > Name: White Mike > Bundle ID: `com.mjsuperstars.app`

6b. Create In-App Purchase Products

- Go to your app > Monetization > Subscriptions
- Create Subscription Group: 'White Mike Premium'
- Add product: `com.mjsuperstars.premium.monthly`

- Reference Name: Premium Monthly
- Duration: 1 Month
- Price: Choose your tier (code defaults show \$9.99)
- Free Trial: 7 days
- Add product: **com.mjsuperstars.premium.yearly**
- Reference Name: Premium Yearly
- Duration: 1 Year
- Price: Choose your tier (code defaults show \$79.99)
- Free Trial: 14 days

6c. Configure App Store Server Notifications

- In App Store Connect > General > App Information > App Store Server Notifications
- Set Production URL: **<https://mj-superstars.onrender.com/api/webhooks/app-store>**
- Set Sandbox URL: same URL (handles both environments)
- Version: V2

6d. App Icon + Privacy

- Upload 1024x1024 app icon in App Store Connect
- Complete App Privacy questionnaire (Data types: Health, Usage, Identifiers; No tracking)

Pricing Decision Needed: Your launch doc said \$4.99/mo and \$44.99/yr, but code defaults show \$9.99/mo and \$79.99/yr. The real prices are set in App Store Connect — the code values are just fallback displays. Choose whichever you want in ASC.

Phase 7: Upload Metadata via Fastlane

Time: ~15 min | Status: READY TO RUN

Run these commands on your Mac (requires Fastlane installed):

- Open Terminal, cd into the project root
- `gem install fastlane` (if not installed)
- Verify your API key file exists: `ls ~/Downloads/AuthKey_TS9A6TPWWR.p8`
- `cd fastlane && fastlane upload_metadata`
- `fastlane upload_screenshots`
- Verify in App Store Connect that metadata and screenshots appear

If key path issues: `export APP_STORE_KEY_PATH=/path/to/your/AuthKey.p8`

Phase 8: Google Sign-In (Optional)

Time: ~30 min | Status: OPTIONAL — skip for v1 if tight on time

- Go to console.cloud.google.com > Create Project
- Enable 'Google Sign-In' API
- Create OAuth 2.0 Client ID (iOS type)
- Add Bundle ID: `com.mjsuperstars.app`
- Copy the Client ID
- Tell Claude the Client ID — I'll add `GOOGLE_CLIENT_ID` to Render for you

The backend code at `/routes/social-auth.js` is already built. Just needs the Client ID env var.

Phase 9: iOS Build, Archive & Upload

Time: ~1-2 hrs | Status: NEEDS XCODE ON YOUR MAC

9a. Sync the latest web build into the iOS project

- `cd mj-superstars-frontend && npm run build`
- `cp -r build/* ../mj-superstars-ios/www/`

9b. Open and configure in Xcode

- Open `mj-superstars-ios/ios/App/App.xcworkspace` in Xcode
- Select **App** target > General tab
- Verify Version: 1.0 and Build: 27 (increment from 26)
- Verify Team: FAAWCBHB9C and Bundle ID: `com.mjsuperstars.app`
- Signing & Capabilities > check 'Automatically manage signing'
- Add capability: Push Notifications (if not already there)

9c. Build and Archive

- Select 'Any iOS Device (arm64)' as build target
- Product > Archive
- Wait for archive to complete (~5-10 min)

9d. Upload to App Store Connect

- Organizer window opens > select latest archive
 - 'Distribute App' > App Store Connect > Upload
 - Wait for processing (~15-30 min)
 - Check build appears in App Store Connect > TestFlight
-

Quick Reference

Item	Value
Bundle ID	com.mjsuperstars.app
Team ID	FAAWCBHB9C
API Key ID	TS9A6TPWWR
Issuer ID	7e6f7a23-b6f4-45ba-a169-32cb4d378fc2
App Apple ID	6758818206
Backend URL	https://mj-superstars.onrender.com
Frontend URL	https://mj-superstars-app.onrender.com
Webhook URL	https://mj-superstars.onrender.com/api/webhooks/app-store
Monthly IAP ID	com.mjsuperstars.premium.monthly
Yearly IAP ID	com.mjsuperstars.premium.yearly
